Tanks | Pumps | Pipework

Why choose us . . .

We would like to take this opportunity to introduce you to our company.

We're straight talking, honest and like to keep things simple!

Using our own fleet of vehicles, we ensure to meet your delivery requirements on time, every time, the next day.

With a comprehensive range of products stocked in our central warehouse, we act as a bolt-on to your project.

Our policy is simple, quick, reliable and trusted.

Please see inside for our product list, which we hope may be of interest.

CONTENTS:

AQUAFLOW 110MM SOLVENT SOIL SYSTEM - BLACK	4/5
AQUAFLOW 110MM SOLVENT SOIL SYSTEM - OLIVE GREEN	6/7
AQUAFLOW 110MM PUSHFIT SOIL SYSTEM - BLACK	8/9

Aquaflow Channel Drain is a unique and easy to install surface water channel drainage system for a domestic environment. It provides a complete and long-term solution for the collection and dispersal of surface water through the unique channel drainage system. The channel drain is available in 1mtr lengths and can be combined with a range of accessories, aiding installation and providing connection into mains drainage.

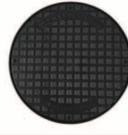

Channel Drain has been produced in accordance with BS EN ISO9001 quality and manufactured to the BS EN 1433 standard in order to comply with regulations

POLYGRID PAVING SYSTEM

PDGRID
POLYGRID
PAVING GRID
 66mm x 66mm | Black

The PolyGrid [Paving Grid] is a durable and versatile solution designed to reinforce and stabilise surface areas such as pedestrian areas and for light-duty use. These grids are made from high-quality, UV-stabilised polypropylene, offering excellent strength and resistance to wear and weathering. The 481mm x 481mm grid sections are designed to interlock, providing a secure and stable surface that can support both pedestrian and light vehicular traffic. With a depth of 40mm, the grids are strong enough to prevent rutting and shifting while promoting effective drainage through their open-cell structure.

**POLYSTORM
MODULAR CELL**

1mtr Length - 0.5mtr Width - 0.4mtr Depth
Total Volume 0.2m3 / Unit Weight 9kg
UnitVolume 0.19m3 (190 Litres)

Features & Benefits:

Polypipe PSM1 Polystorm Plastic Soakaway and Attenuation Crate

Suitable for both attenuation and soakaway systems

100% recyclable at the end of its lifespan

Cost effective, particularly when used as a hybrid, value engineered system

Lightweight and easy to handle with unique rounded corners

Flexible shape, perfect for use in restricted areas, narrow strips or shallow excavation systems

95% void ratio for superior water storage capacity and reduced disposal costs and excavation

Includes four clips and two shear connectors

40-tonnes/m² load-bearing capacity

1m³ can be made up of five crates

50-year design life

What sets this Polystorm Crate apart is its efficient interlocking mechanism. It easily combines with other crates to form a flexible tank beneath a hard surface, effectively storing water redirected from building guttering and surface drains. Its modular design allows specifiers and contractors to create a bespoke subsurface water storage system tailored to the unique demands of their project. This makes it perfect for use in restricted areas, narrow strips or shallow excavation systems.

Each Polystorm unit includes four clips and two shear connectors for straightforward installation.

Standards & Certification

BBA Approved

Please note:

For specific applications, a brick bond connector may be required at an additional cost.

In weak clay soil conditions, the maximum burial depth may be reduced, and Polypipe's water management solutions technical team is available for consultation.

Hybrid Solutions are also available.

The egeplast SLA® Barrier Pipe consists of a core pipe in accordance with BSEN 12201, upon which a protective coating is additionally extruded in order to increase its scratch and abrasion resistance. A multiple layer aluminium foil is applied as a barrier layer between the core pipe and the coating layer. The three brown stripes serve to identify it as a multiple layer pipe.

Protecta-Line's multi-layer construction consists of an internal polyethylene core for carrying clean water, an aluminium barrier layer and finally an outer polyethylene layer for protection. The aluminium barrier prevents the ingress of all known contaminants, of varying concentrations, through the pipe and into the water supply.

- Suitable for corrosive conditions
- Can be used for trenchless installations
- Brown stripes provide easy identification and comply with NJUG regulations
- Proven protection against all recognised brownfield contaminants
- All the installation advantages of polyethylene
- Sizes 25mm to 63mm

The tried and trusted barrier system

Protecta-Line is the market leading and original barrier pipe system that has been tried and tested by water companies and housebuilders for 25 years to safely transport drinking water through areas of contaminated land and sites with potential future contamination concerns. Protecta-Line is approved to BS 8588, the new British standard for barrier pipes and fittings. Specifying a complete barrier system, which has been proven to meet this standard, offers contractors, developers and water utilities the reassurance that a safe and reliable solution is being installed.

When it comes to conveying drinking water through contaminated land safety and quality are vital factors to take into account, which is why it's important to source Protecta-Line.

- No expensive soil sampling required
- Proven protection against all recognised brownfield contaminants
- Save on landfill costs
- Dedicated fittings
- Lightweight and flexible
- Excellent lifetime cost savings
- Kitemarked system
- Peace of mind from using a proven product
- BS 8588 approval
